

Cut Costs by Reducing Encoder Failures in Extreme Environments.

Motion and position applications can take a toll on your encoders, especially in harsh environments with extreme temperatures or when immersed in oil, steam, water or other contaminants. Often, these harsh environments result in an increase in operating expenses from production downtime and encoder repair or replacement. Reducing encoder failures can be achieved by selecting durable equipment that has been designed to endure extreme environments.

Customers all over the world rely on TR Electronic encoders for a wide variety of applications. When it comes to difficult environments, TR Electronic is the preferred solution provider, with a number of options to solve your application challenge.

Heavy Duty Solutions Designed for Extreme Environments:

- **CEV 65 Series** feature IP 65 protection rating and is resistant to oil
- **CEV 115 Series** begs for abuse with an IP 67 protection rating, a solid machined aluminum case that rapidly dissipates heat and a heavy duty shaft and bearing set. This series is also available with heating or cooling for extreme temperature conditions.
- **MP01** stainless steel housing delivers IP 68 protection rating and is designed for salt or acidic environments or even complete submersion in water.

Whether your application demands extreme durability, TR Electronic can work with you to customize a solution that meets your needs through our wide selection of encoders and over 20 interfaces to select from.
